Antibacterial cannabinoids from Cannabis sativa: a structure-activity study.  

CBD compound in cannabis could treat diabetes, researchers suggest  

Regulation of nausea and vomiting by cannabinoids.  
Interaction between non-psychotropic cannabinoids in marihuana: effect of cannabigerol (CBG) on the anti-nausea or anti-emetic effects of cannabidiol (CBD) in rats and shrews.  

Cannabidiol, a non-psychotropic component of cannabis, attenuates vomiting and nausea-like behaviour via indirect agonism of 5-HT(1A) somatodendritic autoreceptors in the dorsal raphe nucleus.  

Cannabinoids as an emergent therapeutic strategy for lessening the impact of inflammation on oxidative stress.  

Cannabidiol rescues acute hepatic toxicity and seizure induced by cocaine.
Anti-inflammatory / antioxidative

- Anti-inflammatory effects of the cannabidiol derivative dimethylheptyl-cannabidiol - studies in BV-2 microglia and encephalitogenic T cells.
- Cannabidiol (CBD) and its analogs: a review of their effects on inflammation
- Anti-inflammatory and antioxidant effects of a combination of cannabidiol and moringin in LPS-stimulated macrophages.

Wakefulness

- The nonpsychoactive Cannabis constituent cannabidiol is a wake-inducing agent.
- Potential Effects of Cannabidiol as a Wake-Promoting Agent

Reducing risk of artery blockage

- Cannabidiol, a nonpsychoactive Cannabis constituent, protects against myocardial ischemic reperfusion injury.

Inhibiting tumors/cancer

- Cannabidiol as potential anticancer drug
- The Antitumor Activity of Plant-Derived Non-Psychoactive Cannabinoids.

Psoriasis

- Cannabinoids inhibit human keratinocyte proliferation through a non-CB1/CB2 mechanism and have a potential therapeutic value in the treatment of psoriasis.

Tranquilizing, managing psychosis

- The relationship between cannabidiol and psychosis: A review.
A critical review of the antipsychotic effects of cannabidiol: 30 years of a translational investigation.

Antipsychotic

Could cannabidiol be used as an alternative to antipsychotics?

Cannabidiol attenuates haloperidol-induced catalepsy and c-Fos protein expression in the dorsolateral striatum via 5-HT1A receptors in mice.

Fluorinated Cannabidiol Derivatives: Enhancement of Activity in Mice Models Predictive of Anxiolytic, Antidepressant and Antipsychotic Effects.
https://www.ncbi.nlm.nih.gov/pubmed/?term=Fluorinated+Cannabidiol+Derivatives%3A

A systematic review of the antipsychotic properties of cannabidiol in humans.

Multiple mechanisms involved in the large-spectrum therapeutic potential of cannabidiol in psychiatric disorders

Neuropsychiatric disorders

Cannabidiol Modulates Fear Memory Formation Through Interactions with Serotonergic Transmission in the Mesolimbic System.

Anxiolytic, Antidepressant and Antipsychotic

Cannabidiol, a Cannabis sativa constituent, as an anxiolytic drug.

Fluorinated Cannabidiol Derivatives: Enhancement of Activity in Mice Models Predictive of Anxiolytic, Antidepressant and Antipsychotic Effects

Endocannabinoid system: Role in depression, reward and pain control (Review).

Drug addiction, anxiety, and depression.

Beyond the CB1 Receptor: Is Cannabidiol the Answer for Disorders of Motivation?
Schizophrenia
Does cannabidiol have a role in the treatment of schizophrenia?
Cannabinoids and schizophrenia: therapeutic prospects.

Alzheimers
The therapeutic potential of the phytocannabinoid cannabidiol for Alzheimer's disease.
Long-term cannabidiol treatment prevents the development of social recognition memory deficits in Alzheimer's disease transgenic mice.

OCD anti-compulsive
Fluorinated Cannabidiol Derivatives: Enhancement of Activity in Mice Models Predictive of Anxiolytic, Antidepressant and Antipsychotic Effects.
https://www.ncbi.nlm.nih.gov/pubmed/?term=Fluorinated+Cannabidiol+Derivatives%3A

Panic attacks
Evidences for the anti-panic actions of Cannabidiol.

MS
Purified Cannabidiol, the main non-psychotropic component of Cannabis sativa, alone, counteracts neuronal apoptosis in experimental multiple sclerosis.

Regulating the immune system
The Profile of Immune Modulation by Cannabidiol (CBD) Involves Deregulation of Nuclear Factor of Activated T Cells (NFAT)
http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2748879/

Pathways and gene networks mediating the regulatory effects of cannabidiol, a nonpsychoactive cannabinoid, in autoimmune T cells.

IBD
CBD & Inflammatory Bowel Disease
Bone growth / fracture healing
Cannabidiol, a Major Non-Psychotropic Cannabis Constituent Enhances Fracture Healing and Stimulates Lysyl Hydroxylase Activity in Osteoblasts.

Pediatric epilepsy
CBD-enriched medical cannabis for intractable pediatric epilepsy: The current Israeli experience.

Epilepsy
Cannabidiol: Promise and Pitfalls
